Background

What is Beamer?

Beamer is a \LaTeX class for creating beautiful presentations.

The sthlm Beamer Theme:

- written using utf8 encoding
- should compile using pdfLaTeX

Updates

NEW in version 0.6

- `beamerthemesthl.m.sty`
 - Removed log from header
 - Removed vertically aligned columns support
 - Removed listings package support
 - Added PxFont option to use the fonts:¹
 - `newpxtext`
 - `newpxmath`

¹This presentation is using the NewPX fonts

Theme Package Requirements

This theme requires that:

1. it is compiled using pdflatex
2. the following packages are installed
 - 2.1 beamer
 - 2.2 eso-pic
 - 2.3 [utf8]inputenc
 - 2.4 pgf
 - 2.5 verbatim
 - 2.6 xcolor

To use the newpx fonts option you need the following packages:

- newpxtext
- newpxmath
- T1** fontenc

The default Beamer Box

Block Title Here

- point 1
- point 2

```
\begin{block}{Block Title Here}
\begin{itemize}
\item point 1
\item point 2
\end{itemize}
\end{block}
```

ALERT BLOCK

Highlight important information.

```
\begin{alertblock}{Alert Block}  
Highlight important information.  
\end{alertblock}
```

Example Block

Examples can be good.

```
\begin{exampleblock}{Example Block}  
Examples can be good  
\end{exampleblock}
```

Green customization

Using the theme colors to generate colored blocks.

```
\begingroup
\setbeamercolor{block title}{fg=black, bg=sthlmGreen}
\setbeamercolor{block body}{bg=sthlmLightGrey}
\begin{block}{Custom Blocks}
Using the theme colors to generate colored blocks.
\end{block}
\endgroup

Table: Selection of window function and their properties

Window	First side lobe	3 dB bandwidth	Roll-off
Rectangular	13.2 dB	0.886 Hz/bin	6 dB/oct
Triangular	26.4 dB	1.276 Hz/bin	12 dB/oct
Hann	31.0 dB	1.442 Hz/bin	18 dB/oct
Hamming	41.0 dB	1.300 Hz/bin	6 dB/oct

Fourier Integral

$$F(j\omega) = \int_{-\infty}^{\infty} f(t) \cdot e^{-j\omega t} dx$$

PGFPlots Bar Plot Example

Figure: Consistent improvement over the last year

PGFPlots 3-D Example

Figure: Easily add beautiful plots

Tutorial

This theme comes with some options to change it's appearance.

Option	Description
nosectionpages	Section pages will be suppressed.

Presentation Structure

A section page will be generated and the section name included in the presentation header for each section of the presentation with the current section being emphasized. If you include subsections in your presentation, then a small block will appear under the section name in the header for each frame. Once a frame has been viewed it will turn green.

It's worth noting that a frame can make up multiple slides.

```
\section{Main Section}  
\subsection{Main Subsection}  
\begin{frame}  
\frametitle{Presentation Structure}  
% Frame Contents Here  
\end{frame}
```

Include a listing of the presentation's sections

```
\maketitle
```

For those longer presentations - keep the table of contents compact.

```
\begin{frame}{Overview}  
  \tableofcontents[hideallsubsections]  
\end{frame}
```

At any time you can highlight text by using the definition:

- **THIS IS SUPER IMPORTANT!**

There are a couple different ways in which you can present your presentation.

- Splitshow (Mac OS X)
<https://code.google.com/p/splitshow/>
- pdf-presenter (Windows)
<https://code.google.com/p/pdf-presenter/>

There are a couple different ways in which you can present your presentation.

- Splitshow (Mac OS X)
<https://code.google.com/p/splitshow/>
- pdf-presenter (Windows)
<https://code.google.com/p/pdf-presenter/>

Let me include a note for this particular slide.

- Splitshow (Mac OS X)
<https://code.google.com/p/splitshow/>
- pdf-presenter (Windows)
<https://code.google.com/p/pdf-presenter/>
